

DOPPLER

CONTEMPORARY LIVING

2,751 total square feet

3 Br, 3.5 Bath

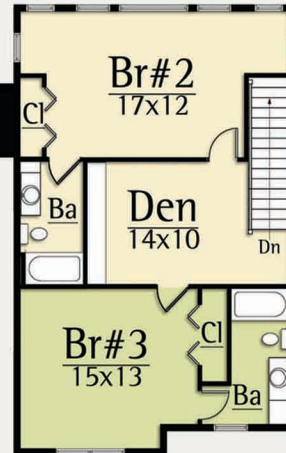

The Doppler Shift is an observed frequency from viewing an object in relative motion.

Similarly, the Doppler home design by MossCreek expresses implied motion with its dramatic roof lines and undulating facade.

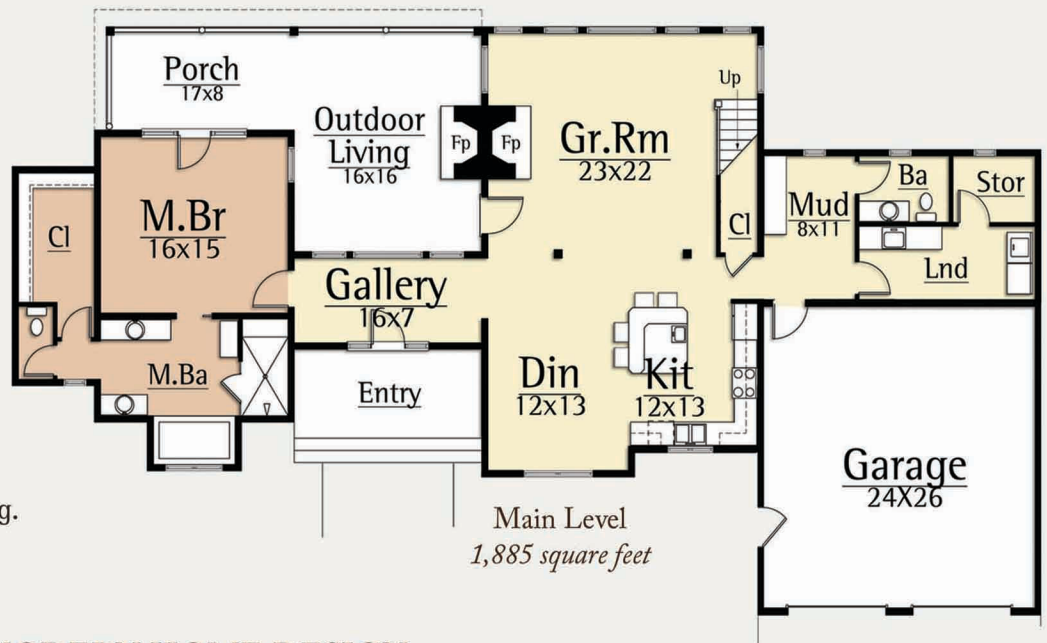

The Doppler features a glass entrance gallery, open plan living, large view glass in the Great Rm, three generous master suites, and an upper level Den.

On the exterior, the Doppler features generous outdoor living with a fireplace.

For quick getaways, or long term living, the Doppler is ideally suited for living for just about any natural setting.

Upper Level
866 square feet

Main Level
1,885 square feet
